1. Plans at a Glance

Pawfolio Free — $0, forever. No signup, no card, no ads, unlimited pets.

Included in Pawfolio Free	Added with Pawfolio Complete
Overview, Pet Profiles, Medications	Vet Visits
Dose tracking (Given / Skip), refill reminders	Vaccinations
Pet Sitter Info sheets (print, text, share)	Weight Tracker
Notes, Important Links, Pet Insurance	Expense Tracker
Sitter mode, client map, Send to a sitter	Timeline
Printing, backups, export	Document Vault
	Live dose sharing with your sitter

Pawfolio Complete is an optional upgrade. If you ever stop it, your records stay visible and exportable. You just can't add new entries to the Complete tabs.

2. Getting Started (5 Minutes)

1. **Open the app** in Safari (iPhone/iPad) or Chrome (Android/computer).
2. **Install it to your Home Screen.**
   - iPhone/iPad: tap Share, then **Add to Home Screen**.
   - Android: tap the ⋮ menu, then **Install app** or **Add to Home screen**.
3. **Add your first pet** in **Pet Profiles**: name, photo, breed, birthday, microchip, and allergies.
4. **Add your vets** on **Overview**: tap **+ Add vet** in the Veterinarians card, enter the clinic and the veterinarian's name, then tap **Save vet**.
5. **Add medications** in **Medications**, with dose amount, schedule, and refill date.
6. **Fill in Pet Sitter Info** (feeding, routines, home address, emergency contacts) so you're ready the moment you travel.
7. **Save a backup** with **Save My Data** (see section 7).

> **Tip:** Cards start out collapsed to keep your phone screen tidy. Tap a card to open it.

3. Everyday Care

Medications and doses

- Pick **set daily times** (for example 8 AM and 8 PM) or **rolling timing** (every X hours after the last dose was actually given).
- **Given** and **Skip** buttons show up 90 minutes before a dose is due. If you need to give it earlier, use **Give early**.
- Tapped the wrong button? You have **5 minutes to undo**.
- Gave it at a different time? You can **correct the time for 30 minutes** after tapping Given.
- Forgot to record it? Tap "**It was given — record the time**" any time in the next 24 hours.
- Add an **If missed** instruction (give when remembered, skip and resume, or a custom note from your vet). Pawfolio displays the instruction but never changes the dose on its own.
- When the refill warning comes up, tap **Refilled / Reordered** to set the next refill date.
- **Archive** a finished medication to keep its history without the reminders.

Reminders

- Turn on phone notifications for medications, refills, and (with Complete) vet visits and vaccinations. Each type can be switched on or off by itself.
- Dose reminders come **30 minutes before** each dose is due.
- On iPhone, reminders only work once the app is **installed to the Home Screen**.

Notes, insurance, and links

- **Notes:** dated, categorized notes. Flag one for your vet, then mark it **Discussed** after the appointment.
- **Pet Insurance:** enter your policy in the pet's profile. The Insurance tab shows a summary, and renewal reminders start 60 days before the renewal date.
- **Important Links:** keep your vet portal, pet insurance, and microchip registry links in one place.

4. Handing Off to Your Sitter

Option A: Sitter sheet (Free)

Use **Pet Sitter Info** to print, text, or share a link to a sitter sheet with feeding notes, medicines, photos, vet contacts, and tap-to-call and directions buttons.

> **Important:** A shared link is a **snapshot** of your info at the moment you share it. If you change something, share again so your sitter gets the update.

Option B: Send to a sitter (Free)

Tap **Send to a sitter** to send your pet details straight to your own sitter's Pawfolio. Use **Add sitter** with their sitter code or link, look over what will be sent, add home access notes, and send. Your sitters are saved under **My sitters**, and **Send update** refreshes their copy.

Forms are encrypted on your phone before they're sent, so only your sitter can open them.

Option C: Live dose sharing (Complete)

Tap **Share doses with a sitter** and choose which medications to include. Your sitter opens the link, types a first name, and checks off doses. You'll see who gave each dose. Your sitter doesn't need an account or a paid plan.

- When you're back, tap **Stop sharing** to turn off the link.
- If you're on Complete, you can add your dose link to Send to a sitter. A **Today's doses** button then shows up on your sitter's client card.

5. For Pet Sitters (Free)

1. Turn on **I'm a pet sitter** (below the tab list in the app menu). A **Clients** tab appears.
2. Set up your business profile to get your **intake link, QR code, and sitter code**.
3. Give your clients your link or code. New clients can fill out the web form, and clients already on Pawfolio can use Send to a sitter.
4. Each client card has pet photos, care details, **Call / Text / Directions**, and access codes that stay hidden until you tap to show them.
5. Tap **Map** to see all your clients as pins on one map. Tap clients in the order you'll visit them, then send the route to Apple Maps (up to 14 stops) or Google Maps (up to 10 stops).

> **Tips:**
>
> - Pin in the wrong spot? Use **Move pin**. It stays where you put it unless the address changes.
> - If two households ended up on one card, open the older version and tap **Make this a separate client**.
> - Turning Sitter mode off **hides** your clients. It doesn't delete them.
> - Your backups include client info and your sitter keys, so keep backup files private.

6. Complete Tabs

- **Vet Visits:** visit records with follow-ups. Attach receipts from the Document Vault.
- **Vaccinations:** edit a record when it renews, and the next due date fills in for you.
- **Weight Tracker:** a chart spaced by real dates. Tap any point to see details.
- **Expense Tracker:** keep track of what each pet costs.
- **Timeline:** notes and visits in one list you can filter. Copy or print it for your vet.
- **Document Vault:** keep photos of records, receipts, and certificates on your phone, in Dropbox, or both (see below).

To unlock: tap **Unlock Pawfolio Complete** and enter your license key. The link in your receipt can activate it for you. One license works on up to **3 devices**.

Document Vault: phone or Dropbox?

Each document can be saved on your phone, in Dropbox, or in both places. To add one, choose the pet and the document type, give it a name, and then tap **Take photo**, paste a Dropbox link, or do both.

	On your phone	In Dropbox
How it's saved	The photo is shrunk to a smaller file and stored in Pawfolio on this device.	You keep the full file in your Dropbox and paste its link into Pawfolio.
Opening it	Fastest, and works without internet.	Needs internet. Tap **View in cloud**.
Space used	Uses some of your phone's storage.	Almost nothing. Pawfolio keeps only a small preview and the link.
Backups	Included when you tap **Save My Data**.	The file stays safe in Dropbox, and the link goes into your backup.
Best for	Things you might need quickly, like rabies certificates, vaccine records, and insurance cards.	Older records, long or many-page files, and anything you want to keep for years.

Moving a photo to Dropbox:

1. Open the document and tap **Share to cloud**.
2. Choose **Dropbox** from the share menu and save the file there.
3. In Dropbox, copy the file's share link.
4. Back in Pawfolio, paste it into the link box and tap **Save link**.
5. To free up space, tap **Make cloud-only**. The full photo is removed from your phone, and the small preview and the Dropbox link stay.

> **Tips:**
>
> - Always save the Dropbox link **before** you tap Make cloud-only. If you remove the photo without a link, you lose the full-size copy.
> - When a document is saved in both places, Pawfolio asks which copy to open. Choose **On-device photo** if you're offline or in a hurry.
> - Keep an eye on the **Vault storage** meter. When it says storage is filling up, make some older documents cloud-only.
> - Google Drive and iCloud Drive work the same way as Dropbox.

7. Backups and Your Data

Your records are saved **in your browser on this device**. They aren't kept in an account, so backups really matter.

- **Save My Data** saves a file named `Pawfolio-Backup.json`. Keep it in the same folder each time so the new file replaces the old one.
- On iPhone/iPad, a **Backup reminder** bar lets you know when you have unsaved changes. Tap it to save.
- **Load My Data** restores a backup. Pawfolio saves a safety copy of your current data first.
- **New phone?** Tap Save My Data on the old phone, open Pawfolio on the new one, then tap Load My Data.
- **Don't clear your browser's website data** for Pawfolio unless you've saved a backup first.

What goes online: reminders, live dose sharing, and Send to a sitter need an internet connection. Live dose sharing and reminders send medication names, pet names, and times to the reminder service. Sitter forms are encrypted before they're sent.

8. Tips and Tricks

- **Do a demo run first.** The demo comes with sample pets, so you can try everything without risk. Tap **Try it with my pet** when you're ready.
- **Put allergies and microchip numbers in Pet Profiles.** They show up at the top of every sitter sheet.
- **Enter the clinic and the vet separately.** Sitters then know both where to go and who to ask for.
- **Use rolling timing for "every 8 hours" meds** so the next dose follows when you actually gave the last one.
- **Archive instead of delete** so you keep the medication history for your vet.
- **Re-share after edits.** Sitter links don't update on their own.
- **Before a trip:** update Pet Sitter Info, share the sheet or tap Send update, turn on dose sharing (Complete), and save a backup.
- **Print the Timeline** before vet appointments so you don't forget anything.
- **iPhone sitters** should add the dose page to their Home Screen before turning on reminders.

9. Troubleshooting

Problem	Fix
App looks out of date	Settings → **Check for updates**. If that doesn't work, tap **Force refresh** (it asks you to save a backup first).
No reminders on iPhone	Install to the Home Screen, open the app from the icon, and turn notifications on again.
Given/Skip buttons are missing	The dose isn't within 90 minutes of its due time yet. Use **Give early** if you need to.
Sitter sees old info	Share again or tap **Send update**. Links are snapshots.
Map pin is wrong	Tap the pin, then **Move pin**.
Complete tabs locked on a new device	Enter your license key (up to 3 devices), or restore a backup.
"Not saved" message	Your phone's storage may be full. Free up space, then try again. Whatever you typed is kept.
